

Hard Drive Security

Systel Business Equipment would like to assure you that we are a leader in the area of MFP security. Our MFP's can ensure documents that are copied, scanned, faxed or otherwise transmitted, do not remain stored on the hard drive or in DRAM memory as a standard feature. Additional standard security capabilities include:

- ISO 15408 EAL Level 3 Certification for the Total System Architecture
- Password Protection
- Hard Drive Encryption
- Hard Drive Reformat
- Data Auto Deletion

We not only conform to current internationally recognized data security standards, but sit on the committees that are developing future information technology security standards. We also offer a wide range of security solutions and services beyond the standard features of our products including integration into corporate IT security and authentication systems and Common Access Card support for DOD and government applications.

For more details on our range of security capabilities and offerings, go to: <http://www.systemloa.com/data-security>

Hard Drive Sanitation—Where available, a qualified service technician will perform a “data overwrite” of the hard drive using built-in sanitation technology. The drive will be cleared of data and re-initialized in the machine before disposal. Availability of this option depends on model and configuration. **Cost - \$195.00 flat charge for labor.**

Hard Drive replacement and return—at the time of disposal, the internal hard drive will be removed and sealed in a container that will be returned to the customer. A replacement hard drive will be installed and re-initialized with the generic device control programs. Availability of this option depends on model and configuration. **Cost - \$275.00 flat charge for labor and replacement cost of the hard drive.**
